EDUCATION

University Of Thessaly - Department of Electrical and Computer Engineering

(Intended) B.S. in Computer Science

September 2026

TECHNICAL SKILLS

Programming Languages: C / C++ (Intermediate), Java (Advanced), SQL(Intermediate), Python(Beginner)

Frameworks: Spring Boot 3.x, Spring Security (JWT), Hibernate/JPA

Tools & Databases: Git, Docker (Learning), Maven, PostgreSQL

Testing: JUnit 5, Mockito (Basic)

PROJECTS

Hospital DBMS | School Project

- **Database Architecture:** Designed a relational database in **PostgreSQL**, implementing a normalized schema (3NF) to manage patient data, doctors, departments, hospitalizations and appointments, and medical records..
- **Data Access Layer:** Developed a Data Access Layer using **JDBC**, writing optimized **Raw SQL queries** and Prepared Statements to prevent SQL Injection and ensure application security.
- **Architecture & Design Patterns:** Implemented the **DAO (Data Access Object) pattern** to decouple business logic from data persistence, resulting in a clean and maintainable codebase.
- **Resource Management:** Managed database connections and transactions effectively using Java's try-with-Resources, ensuring zero memory leaks and optimal performance.

WebChat Application | Personal Project

- **Real-Time Architecture:** Engineered a full-duplex messaging system using STOMP over WebSockets, enabling instantaneous message delivery and eliminating the overhead of traditional HTTP polling.
- **End-to-End Security:** Implemented Stateless JWT Authentication integrated into the WebSocket pipeline via custom Channel Interceptors, ensuring robust security across both REST and persistent socket connections.
- **System Resilience:** Integrated Rate Limiting using the Token Bucket algorithm (Bucket4j) to protect API endpoints from spamming, brute-force attacks, and server-side resource exhaustion.
- **User Friendly Features:** Pagination of chat history, Direct & Group conversations, Live Notifications, Real-time unread count updates and push notifications for users.

OpenStreetMap Graph Processor | Personal Project

- **OSM Integration:** Parse .osm XML files into a weighted graph of Vertices and Edges.
- **Dual Pathfinding Engine:** Implemented Dijkstra's Algorithm and A*(A-star) to find the optimal path between two nodes.
- **Graph Compression:** Reduces the memory footprint by collapsing intermediate "one-way" and "two-way" nodes without losing connectivity or distance accuracy.
- **Interactive CLI:** A command-line interface for real-time graph manipulation and a visual integration via Google Maps

PROFESSIONAL EXPERIENCE

Store Assistant/Salesman | EN KARPON | Volos

- Sales, Inventory Management and other general purpose duties.

Kiosk Assistant/Salesman | Volos

- Sales, Inventory Management and other general purpose duties.

Front Office/Salesman | ACS COURIER | Serres

- Customer Service, Shipment Management , Order Processing.

EXTRACURRICULAR EXPERIENCE

M

-
